

Pat Naidoo Consulting Engineers

Inc RSA CC 2009/211947/23

www.patnaidoo.co.za

Welcome to the New World of Work

Our practice is strategically resourced. By design, it has no employees. For each assignment or project the world's best experts are assembled and supervised to work with local engineering skills. The local engineering skills can come from any source; examples being project owner employees, engineering associates as in empowered and emerging consulting companies, academics from local, regional and international universities and members of engineering institutes locally and internationally. Our emphasis is always on people development and the transfer of skills and technology.

The emphasis is totally on local capacity building and people development.

When the assignment or project is complete, we would have delivered confident and empowered engineers to the owner of the project or to the local engineering faculty. Our vision is that we must continue to serve and contribute positively to Africa's empowered and growing society. Our future and the future of Africa are integrated into one. Our work assignments are in South Africa, in the SADC Region, in Continental Africa and Internationally. When we work in Namibia, for example, we will engage with Namibian citizens and we will leave behind confident and empowered citizens.

Local is relative; Namibians for Namibia and South Africans for South Africa.

The new world of work strategy of **Pat Naidoo Consulting Engineers** has the added benefit of no overheads. Costs are incurred and managed within a project or assignment. The end result is greatly reduced costs to a project or assignment; absolute transparency in pricing of services delivered and all prices are in strict adherence to the published and approved consultancy rates as published by the Engineering Council of South Africa.

Cost Effectiveness by Design; Transparent Pricing of Services; Regulated Tariffs

We are structured to provide the owner in house teams with expert engineering, project management and project development services in a streamlined process on an "as and when required" basis. For the selected specialized topics, we also offer world class, expert services. We are active members of the local South African Institute of Electrical Engineers, The Power and Energy Society of the International Institute of Electrical and Electronic Engineers, based in New Jersey, USA, The Institute of Engineering and Technology based in London, UK and CIGRE, based in Paris, France. We are also affiliate members of the local Association of Municipal Electricity Undertakings.

Always Towards Customer Delight
